

SPRAYAIR

Specific for environment

**Natural Spray
treatment
for animal health**

SPRAYAIR

SPRAY AIR is an innovative mix of natural essential oils, designed to improve breathing and the general well-being of animals (poultry and pigs).

Using plant-based ingredients, SPRAY AIR helps prevent respiratory problems, reducing stress and promoting animal health.

SPRAY AIR is based on the synergy of essential oils that, vaporized in the environment, help purify the air, reduce

the presence of bacteria and viruses, and improve animal breathing.

This means a reduced risk of respiratory complications, contributing to the general well-being and optimal growth of animals.

Natural Camphor:
decongesting and calming properties.

Pine Oil:
a natural antiseptic that supports the respiratory tract.

Peppermint essential oil:
helps clear the respiratory tract and gives a feeling of freshness.

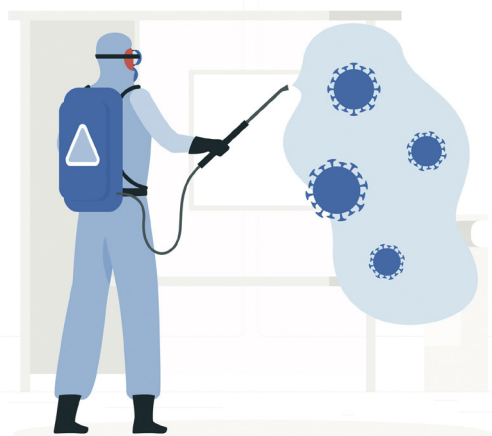

Eucalyptus oil:
a powerful expectorant, it promotes the fluidification of mucus.

Thyme oil:
a natural antimicrobial, protecting the respiratory tract.

Mode of action:

SPRAY AIR is based on the synergy of essential oils that, when vaporized in the environment, help purify the air, reduce the presence of bacteria and viruses, and improve the breathing of animals. This means reduction in the risk of respiratory complications, contributing to the general well-being and optimal growth of animals.

How to use:

SPRAY AIR can be used in the following ways:

1 Dilution in water:

- Dilute the product in a ratio of 1:10 with water.
- Use standard sprayers to spray in birthing areas or weaning areas.
- Spray evenly on surfaces or in the air to create a healthy and purified environment.

2 Concentrated nebulization:

- Use SPRAY AIR as is (without dilution) with specialized nebulizers.
- Ideal for intensive applications or in areas particularly subject to respiratory stress.

Frequency of use:

Nebulize the product when necessary, up to once a day, to ensure maximum benefit and prevention of respiratory problems.

Areas of application:

- Pig farrowing rooms
- Piglet weaning areas
- Areas with high breeding density or respiratory stress conditions (e.g. climate variations)

Available packages:

SPRAY AIR is available in different formats to meet the needs of any company.
